FY26F earnings scenario above the latest annual actual

- 1H26 revenue rose to US\$2,052.0mn from a low base of US\$183.0mn in 1H25.
- Phase 8 fresh-ore access rose to 66mn tonnes from 6mn tonnes; higher grades and milled volume lifted concentrate production 81% yoy.
- Sell: target Rp3,490 (-26.2%) from a Batu Hijau and Elang SOTP/LoM, with no terminal value.

Latest results set the starting point

AMMN published 1H26 results on 2026-09-21. 1H26 revenue rose to US\$2,052.0mn from a low base of US\$183.0mn in 1H25. 1H26 EBITDA rose to US\$1,128.0mn from a low base of US\$86.0mn in 1H25. 1H26 net profit was US\$504.0mn, reversing a loss of US\$146.0mn in 1H25. 1H26 revenue reached 111.1% of FY2025; the comparison is no substitute for a test against the FY26F forecast.

Operating drivers still to be tested

Phase 8 fresh-ore access rose to 66mn tonnes from 6mn tonnes; higher grades and milled volume lifted concentrate production 81% yoy. The H1 presentation states that the smelter and PMR passed their Performance Guarantee Tests; the June smelter rate was 93%, July-August production rates improved/stabilized, and the H2 note cites new performance records in July-August. The expanded plant has a design input capacity of 85 Mtpa, reached mechanical completion in Q2, and took first ore into the mill in mid-August. The presentation gives no smelter feed tonnage or monthly July-August output. Concentrate sales contributed US\$1,078.0mn or 52.5% of 1H26 revenue. The asset-life projection on the valuation page is built from reserves, plant and smelter capacity, unit costs, and official royalties and taxes; what the issuer does not disclose (Elang capex, the rate after the export permit expired) is a labelled Analyst Assumption.

Target Price based on SOTP/LoM

We set our target at Rp3,490 using SOTP/LoM, the Primary Method for miners: Batu Hijau NAV of US\$15.7bn (pit to 2033, then stockpile; the concentrate export permit expired on 2026-04-30, so plant feed is capped by smelter capacity), Elang NAV of US\$6.6bn times a development probability of 65.0% as the project is pre-FID, and inventory of US\$337mn, less PV of overhead, net debt and minorities. Cash flows are discounted at a US\$ WACC of 10.7% (UST 10Y 5.2% + CRP 2.5% + beta x ERP, cost of debt 8.7%) to 2050 with no terminal value. The price deck, the average of the last 12 calendar months (sources in the sensitivity table), is the 2026 deck and is escalated after that by long-run US inflation of 2.2% a year (IMF WEO Apr 2026), as are costs and capex; at the issuer's JORC reserve prices the value is Rp860, with the concentrate export permit extended Rp4,580, and at a discount rate of 12.7% Rp2,900. The issuer has not disclosed Elang capex; the broker research figure is an analyst assumption. The target implies an EBITDA CAGR over FY26F-FY28F of 21.6%, driven by a revenue CAGR of 12.0% from the LoM schedule (feed, metal and price deck). At the Target Price, the stock trades on a FY26F PER of 15.2x, versus a peer median of 13.7x and a historical P/E band mean of 61.1x. Key risks: Copper price, Gold price and Mine life and development capex.

Exhibit 2. Key Financials

FY to 31 Dec	2024A	2025A	FY26F	FY27F	FY28F
Revenue (US\$ mn)	2,664.0	1,847.0	4,123.4	5,354.6	5,173.8
EBITDA (US\$ mn)	1,426.0	1,057.0	2,242.3	3,648.7	3,314.3
EBITDA growth (%)	n.m.	(25.9%)	112.1%	62.7%	(9.2%)
Net profit (US\$ mn)	636.9	249.0	934.0	1,888.4	1,654.6
EPS (US\$ sen)	0.88	0.34	1.29	2.61	2.28
EPS growth (%)	n.m.	(60.9%)	275.1%	102.2%	(12.4%)
PER (x)	59.7x	n.m.	20.6x	10.2x	11.6x
PBV (x)	7.2x	5.1x	3.1x	2.4x	2.1x
EV/EBITDA (x)	29.2x	34.3x	10.9x	6.7x	7.4x

Source: Sectors (market and financial data), issuer disclosures; *Sektoral analysis and estimates*

n.m. in EPS growth (%), EBITDA growth (%) (actual columns): the prior-year base is zero, negative or unavailable; PER (x) (actual columns): a multiple above 100x is not meaningful on a very small earnings, equity or EBITDA base.

1. Latest results and earnings bridge

AMMN published 1H26 results on 2026-09-21. 1H26 revenue rose to US\$2,052.0mn from a low base of US\$183.0mn in 1H25. 1H26 EBITDA rose to US\$1,128.0mn from a low base of US\$86.0mn in 1H25. 1H26 net profit was US\$504.0mn, reversing a loss of US\$146.0mn in 1H25. 1H26 revenue reached 111.1% of FY2025; the comparison is no substitute for a test against the FY26F forecast.

The 1H26 sales breakdown records Copper cathode US\$663.0mn, Refined gold US\$311.0mn, Concentrate sales US\$1,078.0mn. Product mix and sales timing need to be bridged to realized prices before they become an annual forecast.

EBITDA margin 55.0% (1H26) versus 47.0% (1H25). Capex US\$130.0mn (-81.9% yoy); operating cash flow US\$763.0mn (n.m. yoy). Production, capex, working-capital and debt-repayment schedules are still needed to judge whether cash flow is sustainable.

Exhibit 3. Decision summary

Question	Model answer
What changed	Rating Sell (Initiation); latest official actuals 1H26 (published 2026-09-21).
Model expectation	Parent profit FY27F US\$1,956.9mn, FY28F US\$1,714.5mn, FY29F US\$1,767.4mn.
What must happen	Copper price US\$13,002/t (Analyst Assumption (12M deck)); Elang development probability 65% (Analyst Assumption); US\$ discount rate 10.7% (house policy).
What the price implies	The Rp4,730 price equals any one of: Copper price up 29.7%; US\$ discount rate down 3.5 pp, read linearly from the tested range.
What would prove it wrong	The Sell rating changes if Copper price up 18.4% (value Rp4,257, rating becomes Hold)
Next catalyst	9M26 report (OJK deadline 2026-10-31): compare parent profit, volumes and margins with the model path; Mine volume and grade (Phase 8 fresh-ore access rose to 66mn tonnes from 6mn tonnes; higher grades and milled volume lifted concentrate production 81% yoy. (release 2026-09-21)).
Status and limits	Report Date 2026-09-25; price 2026-09-24; status distributable_assumption_led; method SOTP/LoM: Batu Hijau + Elang (65% probability) to 2050, no perpetual terminal value; key limitation: Elang capex and schedule from broker research and the 65% development probability are labelled Analyst Assumptions; price deck at the 12-month average escalated 2.2% a year (US inflation), with costs and capex escalated too; Elang reserves beyond the licence limit are not valued.

Exhibit 4. Official interim results and yoy change

Metric	1H25	1H26	yoy
Revenue (US\$ mn)	183.0	2,052.0	>500%
EBITDA (US\$ mn)	86.0	1,128.0	>500%
Net profit (US\$ mn)	(146.0)	504.0	n.m.
Capex (US\$ mn)	719.0	130.0	(81.9%)
Operating cash flow (US\$ mn)	(644.0)	763.0	n.m.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.
n.m. in the yoy column: a change from or to a negative figure is not meaningful as a percentage.

Exhibit 5. Ratios that explain earnings quality

Ratio	1H25	1H26
EBITDA margin	47.0%	55.0%
Net profit margin	(79.8%)	24.6%
Capex / revenue	392.9%	6.3%
Operating cash flow / EBITDA	(748.8%)	67.6%

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

2. Operations and financial position

Phase 8 fresh-ore access rose to 66mn tonnes from 6mn tonnes; higher grades and milled volume lifted concentrate production 81% yoy. The H1 presentation states that the smelter and PMR passed their Performance Guarantee Tests; the June smelter rate was 93%, July-August production rates improved/stabilized, and the H2 note cites new performance records in July-August. The expanded plant has a design input capacity of 85 Mtpa, reached mechanical completion in Q2, and took first ore into the mill in mid-August. The presentation gives no smelter feed tonnage or monthly July-August output. Concentrate sales contributed US\$1,078.0mn or 52.5% of 1H26 revenue. The asset-life projection on the valuation page is built from reserves, plant and smelter capacity, unit costs, and official royalties and taxes; what the issuer does not disclose (Elang capex, the rate after the export permit expired) is a labelled Analyst Assumption.

Exhibit 6. Revenue mix, 1H26

Item	1H26
Segment: Copper cathode	663.0
Segment: Refined gold	311.0
Segment: Concentrate sales	1,078.0

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 7. Operating and processing metrics

Metric	1H25	1H26	yoy
Fresh ore mined (juta ton)	6	66	>500%
Mill throughput (juta ton)	16	20	25.0%
Copper grade (%)	0.33	0.52	57.6%
Gold grade (g/t)	0.14	0.65	364.3%
Concentrate produced (dmt)	191,657	347,307	81.2%
Concentrate sold (dmt)	-	120,079	-
Copper in concentrate (Mlbs)	89	211	137.1%
Gold in concentrate (oz)	59,578	346,354	481.3%
Copper cathode (ton)	19,805	48,756	146.2%
Copper cathode sold (ton)	18,522	48,654	162.7%
Refined gold (oz)	-	122,131	-
Refined gold sold (oz)	-	65,544	-

Exhibit 9. 1H26 delivery against FY2026 guidance

Product	1H26 delivered	Guidance	Achieved	Implied 2H/1H
Copper in concentrate (Mlbs)	211.0	485	43.5%	1.3x
Gold in concentrate (koz)	346.4	775	44.7%	1.2x
Copper cathode (kt)	48.8	130	37.5%	1.7x
Refined gold (koz)	122.1	350	34.9%	1.9x

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

3. Industry and commodity prices

Copper was USD 14,915/ton on 2026-09-24, up 29.3% over 12 months.

Gold was USD 4,363/oz on 2026-09-01, up 7.5% over 12 months.

Both prices drive the issuer's realised prices; their effect on EBITDA, net profit and value per share is tested in the sensitivity table.

The Basic Materials sub-sector traded at a P/E of 10.1x and a P/B of 1.5x in 2026.

Sectors projects sub-sector EPS for 2026 up 68.1%, with revenue down 11.9%.

Exhibit 11. Issuer's key commodity prices

Metric	Copper (USD/ton)	Gold (USD/oz)
Latest data point	2026-09-24	2026-09-01
Last price	14,915	4,363
2024 average	9,365	2,387
2025 average	10,637	3,436
2026 average	13,537	4,557
12M change	29.3%	7.5%

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

4. Financial performance and profitability

The four charts below use the same 2024A-FY28F period as Key Financials; forecasts appear only when the scenario is validated.

Exhibit 8. Management production guidance, FY2026

Product	1H26 production	Initial guidance	Current FY26 guidance	Implied H2
Concentrate (dmt)	347,307.0	-	900,000.0	552,693.0
Copper in concentrate (Mlbs)	211.0	-	485.0	274.0
Gold in concentrate (koz)	346.4	579.0	775.0	428.6
Copper cathode (kt)	48.8	-	130.0	81.2
Refined gold (koz)	122.1	-	350.0	227.9

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 10. Interim balance sheet

Metric	2026-06-30
Cash (US\$ mn)	818.9
Interest-bearing borrowings (US\$ mn)	5,883.4
Total equity (US\$ mn)	5,861.5
Non-controlling interests (US\$ mn)	95.3
Shares outstanding used in the model (juta)	72,412.4
Shares issued (juta)	72,518.2

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 12. Basic Materials sub-sector valuation and growth

Year	Sub-sector P/E	Sub-sector P/B	Revenue growth	Earnings growth
2022	7.3x	1.1x	52.2%	>500%
2023	9.4x	0.9x	21.6%	129.7%
2024	9.1x	0.9x	31.8%	78.0%
2025	11.0x	1.2x	58.2%	191.7%
2026	10.1x	1.5x	-	-

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 13. Revenue and growth (2024A-FY28F)**Revenue (US\$) & growth**

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Revenue was down 30.7% in 2025A; the FY26F-FY28F scenario gives a CAGR of 12.0%, faster than the historical pace.

Exhibit 15. Net profit and EPS growth (2024A-FY28F)**Net profit (US\$) & EPS growth**

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

2025A net profit was down 60.9% against revenue down 30.7%; the gap comes from lines below operating profit (interest expense up 40.9%, tax down 56.2%). Over FY26F-FY28F net profit grows at a CAGR of 33.1% against 12.0% for revenue.

Exhibit 14. EBITDA and margin (2024A-FY28F)**EBITDA (US\$) & margin**

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

The 2025A EBITDA margin was 57.2% against a 2-year average of 55.4%; the scenario takes the margin to 64.1% in FY28F, above the historical average.

Exhibit 16. Copper production and C1 unit cost (2024A-FY28F)**Copper production (juta pon) & Adjusted C1**

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

2025A copper in concentrate was 209mn lb (down 47.1% from 2024A), gold 103 koz from 803 koz; Adjusted C1 (0.54) US\$/lb (negative: gold and silver credits exceed cash costs). Forecast volume (million lb): FY26F 485 (1H actual + 2H LoM schedule), FY27F 451 (valuation LoM schedule), FY28F 451 (valuation LoM schedule). Model cash cost after gold credit (US\$/lb): FY27F (3.71), FY28F (2.39). Line FY26F n.m.: the valuation LoM schedule covers only part of this year (2H), so a full-year cash cost per pound is not computed.

5. FY26F forecast from the latest release

Official interim results form the first-half basis. The second half follows the analyst-assumed revenue ratio and margins in the exhibit below. The full-year figure is a model scenario, not issuer guidance.

Exhibit 17. FY26 from interim results and the LoM schedule

US\$ mn	1H26 actual	2H26 LoM	FY26F
Revenue	2,052.0	2,071.4	4,123.4
EBITDA	1,128.0	1,114.3	2,242.3
Net profit	504.0	463.9	967.9
Capex	130.0	130.0	260.0

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 18. 2H26 ratios from the LoM schedule

Driver	Ratio	Basis and limits
2H revenue / 1H	100.9%	From the LoM schedule, not a separate assumption.
2H EBITDA margin	53.8%	From the LoM schedule, not a separate assumption.
2H profit margin	22.4%	From the LoM schedule, not a separate assumption.
2H capex / 1H	100.0%	Analyst Assumption from the 2H26 capital spending plan; as in the LoM schedule.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

6. Catalysts, risks and ownership

Catalysts and risks are selected by their effect on volume, realised prices, costs and the balance sheet; ownership and foreign flows are shown as market context.

The largest shareholder is PT Sumber Gemilang Persada with 32.2% of shares.

Foreign investors recorded net buying of Rp243.1bn over the last 20 sessions, against net selling of Rp370.7bn over the full data window.

Exhibit 19. Catalysts, risks and monitoring indicators

Catalyst / risk	Timing and evidence	Driver and transmission	Direction	Model driver	Thesis-change threshold
Mine volume and grade	Phase 8 fresh-ore access rose to 66mn tonnes from 6mn tonnes; higher grades and milled volume lifted concentrate production 81% yoy. (release 2026-09-21)	Concentrate volume and grade set revenue and EBITDA for the current year.	Positive; down if grades weaken again	Smelter and PMR utilisation 2027+ (93%)	this driver alone does not change the rating within its tested range; value above Rp4,257 becomes Hold
Processing ramp-up	The H1 presentation states that the smelter and PMR passed their Performance Guarantee Tests; the June smelter rate was 93%, July-August production rates improved/stabilized, and the H2 note cites new performance records in July-August. The expanded plant has a design input capacity of 85 Mtpa, reached mechanical completion in Q2, and took first ore into the mill in mid-August. The presentation gives no smelter feed tonnage or monthly July-August output. (release 2026-09-21)	Smelter and PMR utilisation raise the share of refined products and margins.	Positive if utilisation rises; negative on disruptions	Smelter and PMR utilisation 2027+ (93%)	this driver alone does not change the rating within its tested range; value above Rp4,257 becomes Hold
FY2026 guidance attainment	1H26 delivery of 34.9% to 44.7% of volume guidance.	Second-half volumes set forecast EBITDA and the Target Price.	Negative if the second half runs below the pace guidance implies	Smelter and PMR utilisation 2027+ (93%)	this driver alone does not change the rating within its tested range; value above Rp4,257 becomes Hold
Copper price	Up 29.3% over 12 months (data to 2026-09-24).	Realised prices flow straight into revenue; see the sensitivity table.	Two-way	Copper price (US\$13,002/t)	Copper price up 18.4% (rating becomes Hold)
Gold price	Up 7.5% over 12 months (data to 2026-09-01).	Realised prices flow straight into revenue; see the sensitivity table.	Two-way	Gold price (US\$4,455/oz)	Gold price up 25.6% (rating becomes Hold)
Net debt and capex	Net debt US\$5,064mn at 2026-06-30.	Interest expense and capex affect net profit and equity value.	Negative if development capex is brought forward	not linked to a driver in the driver-to-value table	The Sell rating changes if value above Rp4,257 becomes Hold
Elang development	Final investment decision targeted 2027; first ore 2031/2032.	Development capex weighs on free cash flow; the asset value enters once the LoM is available.	Two-way	Elang development probability (65%)	this driver alone does not change the rating within its tested range; value above Rp4,257 becomes Hold

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Key risks

Copper price (commodity)

The copper price is up 29.3% over 12 months. Realised prices flow straight into revenue and EBITDA, so a price correction lowers profit and asset value.

Source: Sectors commodity prices

Gold price (commodity)

The gold price is up 7.5% over 12 months. Realised prices flow straight into revenue and EBITDA, so a price correction lowers profit and asset value.

Source: Sectors commodity prices

Mine life and development capex (project)

The final investment decision is targeted for 2027 and first ore for 2031/2032. Delays or higher capex would weigh on free cash flow before new reserves replace the ageing mine.

Source: AMMAN H1 2026 Earnings Release

Net debt and interest cost (funding)

Net debt was US\$5,064.4mn as of 2026-06-30, or 4.8x 2025 EBITDA. Higher rates, refinancing or lower EBITDA would weigh directly on net profit and equity value.

8. Target Price based on SOTP/LoM

We set our target at Rp3,490 using SOTP/LoM, the Primary Method for miners: Batu Hijau NAV of US\$15.7bn (pit to 2033, then stockpile; the concentrate export permit expired on 2026-04-30, so plant feed is capped by smelter capacity), Elang NAV of US\$6.6bn times a development probability of 65.0% as the project is pre-FID, and inventory of US\$337mn, less PV of overhead, net debt and minorities. Cash flows are discounted at a US\$ WACC of 10.7% (UST 10Y 5.2% + CRP 2.5% + beta x ERP, cost of debt 8.7%) to 2050 with no terminal value. The price deck, the average of the last 12 calendar months (sources in the sensitivity table), is the 2026 deck and is escalated after that by long-run US inflation of 2.2% a year (IMF WEO Apr 2026), as are costs and capex; at the issuer's JORC reserve prices the value is Rp860, with the concentrate export permit extended Rp4,580, and at a discount rate of 12.7% Rp2,900. The issuer has not disclosed Elang capex; the broker research figure is an analyst assumption.

Exhibit 24. SOTP/LoM: asset value to equity

Component	US\$ mn	Rp bn	Basis
Batu Hijau NAV (pit, stockpile, plant, smelter, PMR)	15,709	280,200	LoM DCF USD, WACC 10.7%
Elang NAV before risk	6,601	117,740	to 2050; capex from broker research
Elang NAV x 65.0% development probability	4,290	76,531	pre-FID; Analyst Assumption
Issuer's ownership of the asset	100%	100%	assets consolidated; non-controlling interests deducted below
Sum of asset NAV	19,999	356,731	
(-) PV of corporate overhead	(680)	(12,132)	1H26 general expenses x2
(+) Cash	819	14,608	balance sheet at 30 Jun 2026
(-) Financial debt	(5,883)	(104,943)	balance sheet at 30 Jun 2026
(-) Non-controlling interests	(95)	(1,700)	balance sheet at 30 Jun 2026
Equity value	14,159	252,563	
Discount to RNAV	0.0%	0.0%	not applied; Elang risk is carried by the development probability
Value per share (Rp)	-	Rp3,490	72.41bn shares

Exhibit 27. Target reconciliation to market-implied assumptions and consensus

Step (cumulative)	Value per share	Change
SOTP/LoM target	Rp3,490	
Concentrate export permit extended	Rp4,580	+Rp1,090
Elang valued in full (100% development probability)	Rp5,550	+Rp975
Mining until reserves run out, not the 2050 limit	Rp6,400	+Rp855
Then a +20% price deck (alternative to close the remaining gap)	Rp8,650	+Rp2,240
Then a discount rate 2pp lower, at 8.7% (alternative to close the remaining gap)	Rp8,325	+Rp1,925
Consensus target average (8 analysts, 2026-09-25)	Rp6,969	remainder after three steps +Rp565

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 28. Sektoral Target Price and analyst consensus

Note	Value
Sektoral Target Price	Sell Rp3,490
Consensus target average (8 analysts)	Rp6,969
Consensus target range	Rp5,400 to Rp9,550
Recommendations (buy / hold / sell)	8 / 0 / 0
Sektoral target vs consensus average	(49.9%)
Consensus average upside to price	47.3%
Consensus revenue, EBITDA and earnings estimates	Consensus revenue, EBITDA and earnings estimates are not shown without an Investing Pro subscription; there is no citable source of consensus estimates.
Consensus source	Investing.com, analyst consensus (polling 3 bulan terakhir), retrieved 2026-09-25

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 29. Valuation Method Chain

Method	Decision	Value/ share	Rationale
1. SOTP/LoM (primary)	Selected	Rp3,490	Elang capex and schedule from broker research and the 65% development probability are labelled Analyst Assumptions; price deck at the 12-month average escalated 2.2% a year (US inflation), with costs and capex escalated too; Elang reserves beyond the licence limit are not valued; not yet Production-Ready: house-assumption policy became effective after the Report Date
2. RNAV LoM	Not run	-	house-assumption policy became effective after the Report Date
3. EV/EBITDA FY	Cross-check	Rp3,900	the 8x multiple is an analyst assumption, not a validated peer multiple; per-asset LoM/SOTP and later cash and debt movements are not yet modelled

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

9. Drivers and value scenarios

Each material driver is moved across its tested range and revalued with an independent reference calculation; the downside and upside cases move all drivers together. No probability is assigned to the cases.

Exhibit 30. Material drivers and their effect on value

Driver	Base	Year	Base value	Test range	Δ value per share down / up
Copper price	Analyst Assumption (12M deck)	LoM	US\$13,002/t	±10%	-Rp418 / +Rp418
Elang development probability	Analyst Assumption	LoM	65%	±25 pp	-Rp406 / +Rp406
US\$ discount rate	house policy	LoM	10.7%	±1 pp	-Rp314 / +Rp356
Gold price	Analyst Assumption (12M deck)	LoM	US\$4,455/oz	±10%	-Rp300 / +Rp300
Smelter and PMR utilisation 2027+	Juni 2026 run-rate (issuer)	2027+	93%	±5 pp	-Rp194 / +Rp158

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 31. Base, downside and upside cases from one model

Case	Value per share	Vs price	Driver change
Down	Rp2,210	(53.3%)	every driver at the adverse end of its tested range
Base	Rp3,490	(26.2%)	base drivers
Up	Rp5,175	+9.4%	every driver at the favourable end of its tested range

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

10. Peer comparison

The peer group has 6 issuers with market capitalisations of Rp14,288bn to Rp356,064bn. AMMN's P/E of 38.6x compares with a peer median of 8.6x, while its ROE ranks 5 of 6. Outliers: P/E above 50x (MDKA, BRMS); outliers are excluded from the median and average.

Peer multiples below are cross-checks only: peer EV/EBITDA is built from each peer's reports (Sectors data and Yahoo Finance) and is available for 5 peers; it is used in the Method Chain, not in this table. Own-history P/E and P/BV bands are a mean-reversion cross-check on the issuer's own history, not a Target Price: the implied price holds the fundamental drivers (latest EPS and BVPS) constant and lets only the multiple revert to its mean or median.

Exhibit 32. Peer Group: selection rationale

Issuer	Exchange	Status	Rationale
Merdeka Copper Gold	IDX	used	The only other copper producer on the IDX: Wetar copper, gold and the Tujuh Bukit copper project; loss-making over the last 12 months, so its P/E is left out of the median.
Aneka Tambang	IDX	used	State-owned metal miner with precious metals and refining (gold), nickel, and bauxite and alumina segments; comparable gold exposure, no copper.
Archi Indonesia	IDX	used	Gold and silver producer from the Toka Tindung open-pit mine, North Sulawesi.
J Resources Asia Pasifik	IDX	used	Gold producer in Indonesia.
Bumi Resources Minerals	IDX	used	Gold producer (Poboya, Palu) with a copper-gold project in Gorontalo; P/E above 50x, so it is left out of the P/E median.
EMAS	BEI	excluded	The Pani gold mine is still in development; loss-making and P/B above 10x.
INCO	BEI	excluded	Nickel (mining and nickel matte processing).
NCKL	BEI	excluded	Nickel (ore, HPAL and RKEF).
MBMA	BEI	excluded	Nickel and cobalt (NPI and HPAL).
TINS	BEI	excluded	Timah.
TBMS	BEI	excluded	Copper wire and rod producer (downstream), not a miner.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 33. Peer comparison: IDX-listed copper and gold miners

Issuer	Mkt cap (Rp bn)	P/E (x)	P/B (x)	EV/EBITDA (x)	ROE	Net margin	Liabilities/equity (x)
Amman Mineral Internasional (AMMN) (issuer)	356,064	38.6x	3.8x	-	4.6%	13.5%	1.6x
Bumi Resources Minerals (BRMS)	99,958	n.m.	4.4x	68.4x	4.8%	20.1%	0.3x
Aneka Tambang (ANTM)	76,898	8.6x	2.1x	6.9x	19.7%	8.5%	0.4x
Merdeka Copper Gold (MDKA)	76,111	n.m.	5.3x	19.9x	(2.1%)	(3.3%)	1.0x
Archi Indonesia (ARCI)	33,184	13.7x	4.5x	9.0x	33.1%	23.0%	1.6x
J Resources Asia Pasifik (PSAB)	14,288	4.1x	1.8x	2.5x	45.1%	65.2%	0.5x
Peer median (excl. issuer)	76,111	8.6x	4.4x	7.9x	19.7%	20.1%	0.5x
Peer average (excl. issuer)	60,088	8.8x	3.6x	9.5x	20.1%	22.7%	0.7x
AMMN rank	1/6	3/6	4/6	-	5/6	4/6	2/6

11. Financial data

Financial statements 2024A-FY28F: two actual years from the official annual release in US\$ and the first three years of the five-year forecast model (analyst scenario). Forecast revenue, EBITDA and net profit match Key Financials, the performance charts and the valuation exhibits for the same years; lines that cannot be derived read n.m., with the reason in the table note.

Exhibit 38. Income statement

US\$ mn	2024A	2025A	FY26F	FY27F	FY28F
Revenue	2,664.0	1,847.0	4,123.4	5,354.6	5,173.8
Cost of revenue	n.m.	n.m.	n.m.	n.m.	n.m.
Gross profit	n.m.	n.m.	n.m.	n.m.	n.m.
Operating expenses	n.m.	n.m.	n.m.	n.m.	n.m.
Operating profit (EBIT)	n.m.	n.m.	1,805.4	3,211.8	2,877.4
Interest income	n.m.	n.m.	n.m.	n.m.	n.m.
Interest expense	n.m.	n.m.	(511.4)	(511.4)	(511.4)
Other income (expense)	n.m.	n.m.	41.7	0.0	0.0
Profit before tax	n.m.	n.m.	1,335.6	2,700.4	2,366.0
Income tax	n.m.	n.m.	(367.8)	(743.6)	(651.5)
Non-controlling interests	(5.1)	(9.0)	(33.8)	(68.4)	(59.9)
Net profit	636.9	249.0	934.0	1,888.4	1,654.6

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

n.m. in Cost of revenue, Gross profit, Operating expenses, Operating profit (EBIT), Interest income, Interest expense, Other income (expense), Profit before tax, Income tax (actual columns): the official US\$ annual release carries only revenue, EBITDA, earnings and equity; Sectors data for this line exists only in converted rupiah; Cost of revenue, Gross profit, Operating expenses (FY26F-FY28F columns): The Analyst Scenario sets an EBITDA margin, not a gross margin; splitting EBITDA into cost of revenue and operating expenses would need a gross-margin assumption that the valuation does not use and that is not sourced, so it is not modelled; Interest income (FY26F-FY28F columns): Sectors data do not carry interest income for non-financial issuers; interest income is included in net non-operating items.

Exhibit 39. Balance sheet

US\$ mn	2024A	2025A	FY26F	FY27F	FY28F
Cash and equivalents	n.m.	n.m.	1,627.4	3,184.5	4,603.9

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

n.m. in Depreciation and amortisation, Change in working capital, Other operating items, Net operating cash flow, Capex, Other investing items, Net investing cash flow, Debt drawdown (repayment), Dividends paid, Share issuance (buyback), Other financing items, Net financing cash flow, Net change in cash, Opening cash, Closing cash, Free cash flow (operating - capex, memo) (actual columns): the official US\$ annual release carries only revenue, EBITDA, earnings and equity; Sectors data for this line exists only in converted rupiah.

Exhibit 41. Key ratios

Ratio	2024A	2025A	FY26F	FY27F	FY28F
Growth (%)					
Revenue	n.m.	(30.7%)	123.2%	29.9%	(3.4%)
EBITDA	n.m.	(25.9%)	112.1%	62.7%	(9.2%)
Operating profit	n.m.	n.m.	n.m.	77.9%	(10.4%)
Net profit	n.m.	(60.9%)	275.1%	102.2%	(12.4%)
Profitability (%)					
Gross margin	n.m.	n.m.	n.m.	n.m.	n.m.
EBITDA margin	53.5%	57.2%	54.4%	68.1%	64.1%
Operating margin	n.m.	n.m.	43.8%	60.0%	55.6%
Net profit margin	23.9%	13.5%	22.7%	35.3%	32.0%
ROAA	n.m.	n.m.	6.3%	12.0%	9.5%
ROAE	12.1%	4.7%	15.9%	26.2%	19.1%
Leverage (x)					
Net gearing (net debt / equity)	n.m.	n.m.	0.8x	0.4x	0.2x
Interest cover (EBIT / interest expense)	n.m.	n.m.	3.5x	6.3x	5.6x

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

n.m. in Revenue, EBITDA, Net profit (actual columns): not meaningful: the comparison base is zero, negative or unavailable; Operating profit, Gross margin, Operating margin, ROAA, Net gearing (net debt / equity), Interest cover (EBIT / interest expense) (actual columns): the official US\$ annual release carries only revenue, EBITDA, earnings and equity; Sectors data for this line exists only in converted rupiah; Operating profit (FY26F-FY28F columns): not meaningful: the comparison base is zero, negative or unavailable; Gross margin (FY26F-FY28F columns): The Analyst Scenario sets an EBITDA margin, not a gross margin; splitting EBITDA into cost of revenue and operating expenses would need a gross-margin assumption that the valuation does not use and that is not sourced, so it is not modelled.

Exhibit 42. Financial statement projection assumptions**Assumption and source**

Analyst Scenario: FY26F-FY30F from official 1H26 actuals plus H2 assumptions and 4 out-years from the valued LoM schedule (revenue, EBITDA, capex, D&A, interest, tax and PNPB); Key Financials and the valuation use the same revenue, EBITDA, capex and profit.

The US\$ scenario is converted to Rupiah at Rp17,837/US\$ (2026-09-24), as in Key Financials, the charts and the US\$ DCF; opening FY2025 balance sheet from equity of US\$5,431.0mn (AMMAN FY 2025 Earnings Release); other Sectors balance-sheet lines restated from the Sectors rate of Rp16,737/US\$ (implied by equity) to the same rate.

Valuation assumption: share count 72.41bn shares, source official share register at 2026-06-30, adjusted for corporate actions to 2026-09-25, flat; EPS uses parent profit and BVPS parent equity over the same share count as the valuation and PER.

FY26 weighted share count (PSAK 56) 72.41bn shares, using the issuer's 1H weighted figure; recorded to reconcile the issuer's annual EPS, while model EPS uses the share count at the Report Date.

LoM schedule: annual D&A from the valued mine schedule (FY26F = official 1H26 D&A + H2 D&A from the LoM schedule).

LoM schedule: effective tax rate 27.5%, source official 1H26 effective income tax 20.3% and PNPB 9.1%, combined; as in the valuation. Pre-tax profit = scenario consolidated net profit / (1 - rate); tax = the difference.

Model mechanics: EBIT = scenario EBITDA - D&A; net non-operating items (interest expense and other, net) = pre-tax profit - EBIT, implied by the scenario net margin, not a separate assumption; interest expense = 2x official 1H finance costs, as in the LoM schedule.

LoM schedule: working-capital change from receivable, product-inventory and operating-payable days at 30 Jun 2026 over annual revenue, plus the settlement of customer advances in product, as in the valuation; the first year holds the H2 change.

Analyst Scenario: parent share of profit 96.5%, source official FY2025 parent share, AMMAN FY 2025 Earnings Release; minority profit adds to NCI equity from an opening Rp1,657.2bn, source book value FY2025, AMMAN FY 2025 Earnings Release; dividends to NCI are not modelled.

Unsourced Analyst Assumption: payout 25.0%, analyst assumption of 25% no historical payout in Sectors data, used only to roll cash and equity forward, as in the screening forecast; cash dividends in year t = payout x parent profit of year t-1; FY26F uses actual FY2025 profit from the official US\$ annual release. DPS and payout are not shown because Sectors data has no historical payout.

Model mechanics: equity = FY2025 balance from the official US\$ annual release + consolidated net profit - dividends; no share issuance or buyback.

Screening assumption: opening debt flat at the FY2025 Sectors balance (short-term Rp10,023.9bn, long-term Rp105,473.3bn); no sourced repayment or drawdown schedule, as in the screening forecast.

Screening assumption: other non-current assets Rp0.0bn and non-debt non-current liabilities Rp19,913.2bn flat at the FY2025 balance; investing cash flow is capex only and financing cash flow only dividends and cash-balancing short-term debt, with no share issuance.

Analyst Scenario and LoM schedule: annual capex from the scenario; fixed assets = FY2025 balance Rp191,180.6bn + capex - D&A (Sectors fixed assets cover all non-current assets).

Model mechanics: closing cash = FY2025 opening cash Rp12,072.6bn + net cash flow, not a plug; operating cash flow = parent profit + D&A - working-capital increase + minority profit; the balance sheet balances because every line moves through the income statement or cash flow.

Screening assumption: short-term debt balances cash. Minimum cash = the lower of FY2025 cash Rp12,072.6bn and the lowest cash-to-revenue ratio of FY2023-FY2025 (28.3%, FY2024) x that year's revenue; when cash before financing falls below the minimum, the shortfall is drawn as short-term debt and repaid first once cash exceeds the minimum. Its interest is not added: pre-tax profit is still derived from scenario net profit, so the implied net non-operating items carry it. Not used in this scenario.

12. Valuation appendix: discount rates, tests and assumptions

Discount-rate components and their benchmarks, additional tests and the list of analyst assumptions behind the SOTP/LoM target. The following appendices cover royalties, capex, reserves, Elang, the mine schedule and the corporate bridge.

The FY26 H2 reconstruction and its reconciliation tests (19 sections: 2Q26, the revenue and realised-price bridge, provisional settlement, inventory and loan flows) are not printed because they barely move the life-of-mine target; all are kept in the report's audit trail.

Exhibit 43. US\$ WACC components for mine-asset NAV

Parameter	Value
Risk-free (UST 10Y, 2026-09-24)	5.2%
Indonesia country risk premium (analyst policy parameter)	2.5%
Beta (analyst policy parameter)	1.10
Equity risk premium (analyst policy parameter)	4.0%
Cost of equity (CAPM)	12.1%
Pre-tax cost of debt	8.7%
Effective tax rate (PPh + PNBP)	27.5%
After-tax cost of debt	6.3%
Debt weight (market value)	23.5%
Equity weight (market value)	76.5%
US\$ WACC (Batu Hijau and Elang)	10.7%

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 44. Discount-rate parameters: policy vs benchmarks

Parameter	Policy	Benchmark	Source, date
Risk-free (UST 10Y)	5.2%	same as the policy value	Yahoo Finance (UST 10Y), Report Date
Indonesia country risk premium	2.5%	2.46% on Moody's Baa2 rating; 1.60% on sovereign CDS	Damodaran, 5 Jan 2026
Beta	1.10	1.10 (Blume; regression 1.15, 112 weekly returns against the JCI since 2024-07-26)	Sektoral regression, IDX prices to 2026-09-24
Equity risk premium (mature market)	4.0%	4.23%: implied S&P 500 ERP, early 2026	Damodaran, Jan 2026
Cost of equity (CAPM)	12.1%	12.3% on the benchmark inputs (+23 bp); memo	rows above

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 45. Additional SOTP/LoM tests

Scenario	Value per share
Concentrate export permit extended (full 85 Mtpa feed, per the issuer's mine plan)	Rp4,580
Elang development probability 0%	Rp2,430
Elang development probability 25%	Rp2,840
Elang development probability 75%	Rp3,650
Elang development probability 100%	Rp4,060
Elang mined until reserves run out (2075), not 2050	Rp4,020
USD/IDR rate -5%	Rp3,310
USD/IDR rate +5%	Rp3,660

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 46. Analyst Assumptions in the SOTP/LoM

Assumption	Value	Base
USD discount rate	10.7%	US\$ WACC from UST 10Y, CRP, beta and ERP per house policy and a market-based cost of debt; components in the US\$ WACC table.
Elang development probability	65.0%	A 65% development probability = two gates, a labelled Analyst Assumption (rounded from 0.80 x 0.80 = 0.64): (1) AMDAL approval and the 54 km overland conveyor corridor permit, 0.80: the AMDAL public consultation only began on 22 September 2026 as an input-gathering stage (ANTARA) and corridor permitting is still under way, but the operator has already permitted and built Batu Hijau, the concentrator and the smelter, and the IUPK covers mining to at least 2050; (2) FID and funding after permits, 0.80: the definitive feasibility study was completed in 2025, Elang's 2,581mn tonnes of JORC reserves (AMC Consultants) are economic at reserve prices of Cu US\$4.00/lb and Au US\$2,500/oz, below the model's price deck, and the project uses the existing 85 Mtpa concentrator, power plant, Benete port and smelter; the issuer targets an Elang FID in 2027 (AMMAN H1 2026 Earnings Presentation, 21 September 2026, slide 20); the remaining risks are that FID has not been taken, capex is undisclosed and net debt is about US\$5bn. The probability is applied to the Elang NAV including its capex (Elang starts after Batu Hijau, so the Batu Hijau schedule is unchanged). Sensitivities at 25%, 50%, 75% and 100% are still shown; the previous assumption was a flat 50%.
Elang development capex	US\$2.29bn (2036, 2037)	The issuer has not yet disclosed Elang capex. Verdhana Research (10 June 2026), Fig. 23: total capex of US\$1,187mn in 2029F and US\$1,177mn in 2030F against sustaining capex of ~US\$200mn; the difference (~US\$1.96bn) is read as Elang development capex. Attributing it to Elang is the analyst's reading of the broker projection, not issuer data. The broker profile (first ore 2031) is shifted to end a year before the first Elang feed in this schedule (2038): the issuer starts Elang after the Batu Hijau mine life, and at 85 Mtpa the plant is filled by the pit and then the stockpile first.
Elang sustaining capex	US\$184mn/yr	Verdhana Research (10 June 2026), Fig. 23: Elang capex 2031F-2050F of US\$3,683mn over 20 years (~US\$184mn a year).
Stockpile rehandling	US\$1.04/t	Stockpile rehandling cost is undisclosed; a third of the 1H26 mining cost (US\$3.11/t) as an Analyst Assumption.
Stockpile-phase capex	50.0%	Once pit mining stops, sustaining capex is assumed at half the 1H26 run-rate (no mining fleet).
Concentrate exports	no	The temporary export permit expired on 2026-04-30 with no evidence of an extension; plant feed is capped at ore whose copper the smelter can process (capacity x latest utilisation), the remaining ore is processed later, and 2H26 concentrate above capacity is smelted first in 2027. The pit and stockpile therefore run longer than the issuer's schedule (pit 2031/2032, stockpile 2033/2034) and Elang starts later; the issuer's schedule with exports is in the additional tests.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 47. Further evidence to test the Target Price

Check	Evidence required
Official interim results	Available: 1H26 with financial and operating data.
Physical forecast	Needs an annual schedule of production, processing and sales, prices, costs, tax and capex.
SOTP	Cash, financial debt, NCI and shares are sourced; LoM asset NAV, PV of overhead and the reconciliation of customer advances to deliveries/cash flow are not yet available.
Method Chain	value basis SOTP/LoM.
Release decision	The SOTP/LoM-based target is published; Elang capex, the concentrate export permit and the issuer's annual mine plan will retest the asset value.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

13. Royalties, export duty and netback

Official HMA for all 12 H1 periods has been mapped and sets the top tier of PP 19/2025. HMA is not AMMN's shipment price, however: assay/payable, HPM, TC/RC, volume and royalty base by product, and the tie-out to net realized price and cash are undisclosed. H1/H2 netback is therefore not validated, and statutory rates are not deducted again from the realized price.

Exhibit 48. Royalty and export-duty framework; netback not yet computable

Product / actual	Rate or amount
Official 1H 2026 HMA: copper (12 periods, US\$/dmt)	11,790.32-13,648.27; every period in the top tier
Official 1H 2026 HMA: gold (12 periods, US\$/oz)	4,302.37-5,135.76; every period in the top tier
Applicable tier: Cu concentrate / Cu cathode	10% / 7% of the reference price
Applicable tier: by-product Au in concentrate / refined gold	16% / 16% of the reference price
Copper in concentrate (HMA US\$/t)	<7,000: 7.0%; 7,000-<8,500: 7.5%; 8,500-<10,000: 8.0%; ≥10,000: 10.0%
By-product gold in concentrate (HMA US\$/oz)	<1,800: 7.0%; 1,800-<2,000: 10.0%; 2,000-<2,200: 11.0%; 2,200-<2,500: 12.0%; 2,500-<2,700: 14.0%; 2,700-<3,000: 15.0%; ≥3,000: 16.0%
Copper cathode (HMA US\$/t)	<7,000: 4.0%; 7,000-<8,500: 5.0%; 8,500-<10,000: 6.0%; ≥10,000: 7.0%
Refined gold, primary metal (HMA US\$/oz)	<1,800: 7.0%; 1,800-<2,000: 10.0%; 2,000-<2,200: 11.0%; 2,200-<2,500: 12.0%; 2,500-<2,700: 14.0%; 2,700-<3,000: 15.0%; ≥3,000: 16.0%
Concentrate export duty in the period AMMAN confirmed	7.5%
PNBP expense 1H 2026 (US\$m)	50.6
Cash paid: royalties, taxes and PNBP 1H 2026 (US\$m)	304.4
Copper concentrate HPM formula	Cu/Au/Ag payable × (HMA – TC/RC); Kepmen 144/2026
Undisclosed contract inputs for netback	assay/payable, TC/RC, penalties, HMA per shipment, volume timing

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

14. Historical capex and FY26 Analyst Assumptions

The FY26 capex scenario of US\$390mn leaves about US\$260mn for H2 after H1 actuals. That FY26 scenario total is US\$84mn below the US\$474mn of Phase 8 sustaining capex reported for FY25, and it offers no like-for-like comparison with the FY25 projects. The interim report shows consolidated CIP of US\$3,082mn, with estimated completion stretching to 4Q27; that figure is accumulated cost, not remaining cost or an FY26 budget. As CIP is not broken down by project and there is no payment schedule, the H2 capex assumption is not validated. Capex, working capital, interest, tax and debt repayment are not yet reconciled into H2 FCFF.

Exhibit 49. Historical capex, H1 actual and FY26 scenario

Period / base (US\$m)	Capex	Status
FY2024 issuer actual	1,792.0	Reported
FY2025 issuer actual	1,372.0	Reported
FY2025: Phase 8 mine sustaining	474.0	Reported; already above the FY26 scenario total
FY2025: copper smelter and PMR	177.0	US\$m by use
FY2025: processing plant expansion	577.0	US\$m by use
FY2025: combined-cycle power plant and LNG facilities	144.0	US\$m by use
1H2025 actual	719.0	Comparator in the H1 release
1H2026 actual	130.0	Interim report; cash capex + additions
FY2026 Analyst Scenario	390.0	Analyst Assumption; not issuer guidance
H2 implied by the scenario	260.0	FY26 scenario less 1H actual

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 50. Construction in progress: book cost and completion range

Asset category	Accumulated cost Jun-26 (US\$m)	% complete (range)	Estimated completion	Accumulated cost Dec-25 (US\$m)	% complete (range)
Buildings, facilities and related assets	3,002.5	0.5-99.4%	Q3 2026-Q4 2027	3,018.3	0.1-90.2%
Machinery and equipment	79.8	2.6-99.4%	Q3 2026-Q4 2027	90.7	0.1-98.9%
TOTAL konsolidasi	3,082.3	- -		3,108.9	-

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

15. Reserves, project schedule and costs

The latest release gives a reserve/resource basis and mine-life milestones, plus some actual unit costs. The official cash-cost series moved from US\$14.68/lb in 1H25 to negative US\$0.58/lb in 1H26, alongside a large change in by-product credits; the 1H26 figure is not a forward cost run-rate. The H1 presentation says the mine plan is still being prepared, while OLC corridor permitting and the selection of an early-engineering contractor are under way. The FY2025 presentation states that the Elang feasibility study is complete, with technical optimisation still in progress. The 2025 Annual Report says Elang operations continue until at least 2050. The September AMDAL scoping announcement adds a planned ore-mining scale of about 90 Mt/year and the initial infrastructure scope, but no

annual production schedule yet. The OLC length of 54 km versus 60 km is not yet reconciled. The public data do not yet contain an annual production schedule, per-asset costs, Elang capex, or FCFF for a LoM NAV.

Exhibit 51. Historical unit costs and Q3 debt repayment

Metric	1H25	1H26 / Q3 actual	FY25 full year	Unit / basis
Mining cost	2.44	3.11	2.54	US\$/ton; FY25 kolom tahunan
Processing cost	5.70	5.05	-	US\$/t ore
Smelting and refining cost	3,340	2,044	-	US\$/ton katoda
Q3 debt repayment (reported actual)	-	350	-	US\$ mn; presentasi manajemen, 21 Sep 2026

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 52. Historical operating costs by half-year

Metric	H1 2024	H2 2024	H1 2025	H2 2025	H1 2026
Penambangan (US\$/t material mined)	2.34	2.15	2.44	2.64	3.11
Pengolahan (US\$/t throughput)	4.96	5.85	5.70	6.04	5.05
Smelting/refining (US\$/t katoda)	-	-	3,340	1,604	2,044

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 53. Unit cash cost bridge per lb of Cu sold

Component (US\$/lb Cu sold)	H1 2024	H2 2024	H1 2025	H2 2025	H1 2026
Operating costs, before adjustments	3.40	6.62	12.58	3.57	3.00
By-product credits	(4.64)	(7.39)	(0.19)	(3.74)	(5.55)
Smelting/refining treatment costs	0.16	0.19	1.62	0.54	0.53
Royalty	0.67	1.00	0.67	1.00	1.44
Reported unit cash cost	(0.40)	0.43	14.68	1.37	(0.58)

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 54. Mineral reserves and resources

Asset	Category	Mt	Cu %	Au g/t	Cu Blb	Au Moz
Stockpile Batu Hijau	Stockpile	316	0.33	0.14	2.31	1.40
Batu Hijau	Reserves	777	0.34	0.24	5.75	5.90
Batu Hijau	Resources	2,609	0.27	0.15	15.52	12.40
Elang	Reserves	2,581	0.32	0.33	18.17	27.00
Elang	Resources	3,982	0.30	0.28	26.03	36.70

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

16. Elang: mine and infrastructure scale at the AMDAL stage

The announcement gives an initial scale boundary for testing the design's consistency, not for building a throughput or capex trajectory. The difference in conveyor length and the absence of a mine schedule mean Elang FCFF cannot yet be computed from these figures.

Exhibit 55. Elang scale and scope at the AMDAL announcement

Component	Announced figure / plan	Limits of interpretation
Planned Elang ore mining capacity	~90 Mt/yr	Planned scale in the AMDAL preparation notice; not annual output or production guidance.
Annual processing plant capacity	85 Mt/yr	Nameplate figure of the plant expansion in the H1 presentation; defined differently from Elang mining capacity.
Plant expansion design range (Annual Report 2025)	85-90 Mt/yr; first ore to mills July 2026	A range disclosed earlier; the H1 2026 presentation later cites plant capacity of 85 Mt/yr. Not used as an additional throughput scenario.
Elang overland conveyor	54 km (Mar-26 presentation) / approximately 60 km	Length/route not yet reconciled; the difference affects scope and the capex estimate.
Planned support facilities	primary ore crusher; 275 kV transmission line approximately 80 km; main access road connecting Elang with Batu Hijau; employee accommodation, offices, workshops, warehouses, and fuel storage	Preliminary AMDAL scope; it holds no costs, detailed construction schedule or contract commitments.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

17. Operating schedule and mine development status

This schedule summarises public milestones, not a validated annual production or cash-flow schedule. Elang still needs studies, technical optimisation, permits and an investment decision; the indicative investment figure is not yet included in the valuation.

Exhibit 56. Operating schedule and mine development status

Milestone / work	Announced estimate or status
Batu Hijau mining until	2031/2032
Stockpile processing until	2033/2034
Elang first ore	2031/2032
Elang final investment decision target	2027
Mine planning	in progress
OLC corridor permitting	in progress
Pemilihan kontraktor early engineering	in progress
Elang feasibility study	completed (FY2025 presentation)
Elang technical optimisation	ongoing: primary crusher relocation, sediment pond/PAR redesign, and waste dump optimization
Elang infrastructure scope	Uses existing Batu Hijau concentrator, power facilities, Benete port/jetties and smelter; Elang ore requires a 54 km overland conveyor, extension of the primary access road, and high-voltage transmission infrastructure.
Elang: expected operating horizon	at least 2050
Detailed engineering and optimisation (Annual Report 2025)	ongoing as of the 2025 Annual Report
Indicative initial Elang investment (not a validated budget)	Rp6-8tn; preliminary figure the Regent conveyed as information from AMNT
Construction target stated at the public consultation	mid-2027, after completion of study and permitting requirements
AMDAL public consultation context (22 Sep 2026)	At the 22 September public consultation for the feasibility study and AMDAL, AMNT described the meeting as an input-gathering stage. ANTARA reported the project remained at exploration stage, with AMDAL and initial-area studies still to be completed and further government/socialization steps before construction.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

18. Corporate bridge for the SOTP

Cash, financial debt, non-controlling interests and shares outstanding now have sourced inputs. The bridge is still partial: the PV of overhead and the asset NAVs are not yet available; the Glencore advance needs mapping to delivery obligations before net debt is final.

Exhibit 57. Verified SOTP corporate bridge, still partial

Component	Value / status	Basis and evidence limits
Cash and equivalents	Rp14.61tn	Financial Statements 30 Jun 2026, p. 1; translated at Yahoo Finance IDR=X, 2026-09-24 Rp17,837/USD.
Financial debt	Rp104.94tn	Net bank loans + leases/financing; pp. 2, 89, 98; translated at Yahoo Finance IDR=X, 2026-09-24 Rp17,837/USD.
Non-controlling interests	Rp1.70tn	Financial Statements 30 Jun 2026, p. 3; translated at Yahoo Finance IDR=X, 2026-09-24 Rp17,837/USD.
Shares outstanding	72,412.4mn	Financial Statements 30 Jun 2026, p. 101; after treasury shares.
PV of corporate overhead	Not yet available	There is no sourced overhead projection or capitalisation basis.
Customer advances	US\$388.4mn	Not included in financial debt; contract delivery volumes, prices and cash-flow allocation are not yet mapped.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

19. LoM schedule FY27F-FY30F

Years after FY26F come from the LoM schedule that also underlies the target: plant feed, smelted metal, price deck, unit costs, royalty and tax. Net profit deducts scheduled D&A, interest at twice 1H26 finance costs, and tax and PNPB at 1H26 effective rates. The company gives no annual schedule; this is a Sektoral estimate.

Exhibit 58. Basis of each year FY26F-FY30F: interim scenario and LoM schedule

Year	LoM schedule	Basis and limits
FY26F	EBITDA margin 54.4%; net margin 23.5%; capex/revenue 6.3%	Official 1H26 actuals plus analyst H2 assumptions; detail in the FY26F scenario exhibit. Source: AMMAN H1 2026 Earnings Release.
FY27F	Revenue growth 29.9%; EBITDA margin 68.1%; net margin 36.5%; capex/revenue 5.0%	LoM schedule: feed 54 Mt (Batu Hijau concentrate 2H26, Batu Hijau pit), cathode 205 kt, refined gold 579 koz; Cu deck US\$13,288/t and Au US\$4,553/oz (2026 deck escalated by long-term US inflation of 2.2% a year (IMF WEO Apr 2026)); EBITDA after corporate overheads; interest at 2x 1H26 finance costs; tax and PNBP at 1H26 effective rates. Not issuer guidance.
FY28F	Revenue growth -3.4%; EBITDA margin 64.1%; net margin 33.1%; capex/revenue 5.3%	LoM schedule: feed 68 Mt (Batu Hijau pit), cathode 205 kt, refined gold 515 koz; Cu deck US\$13,580/t and Au US\$4,653/oz (2026 deck escalated by long-term US inflation of 2.2% a year (IMF WEO Apr 2026)); EBITDA after corporate overheads; interest at 2x 1H26 finance costs; tax and PNBP at 1H26 effective rates. Not issuer guidance.
FY29F	Revenue growth 2.2%; EBITDA margin 64.1%; net margin 33.4%; capex/revenue 5.3%	LoM schedule: feed 68 Mt (Batu Hijau pit), cathode 205 kt, refined gold 515 koz; Cu deck US\$13,879/t and Au US\$4,755/oz (2026 deck escalated by long-term US inflation of 2.2% a year (IMF WEO Apr 2026)); EBITDA after corporate overheads; interest at 2x 1H26 finance costs; tax and PNBP at 1H26 effective rates. Not issuer guidance.
FY30F	Revenue growth 2.2%; EBITDA margin 64.1%; net margin 33.7%; capex/revenue 5.3%	LoM schedule: feed 68 Mt (Batu Hijau pit), cathode 205 kt, refined gold 515 koz; Cu deck US\$14,184/t and Au US\$4,860/oz (2026 deck escalated by long-term US inflation of 2.2% a year (IMF WEO Apr 2026)); EBITDA after corporate overheads; interest at 2x 1H26 finance costs; tax and PNBP at 1H26 effective rates. Not issuer guidance.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

PER and PBV above 100x or on a non-positive base are shown as n.m. DPS and dividend yield n.m.: this model does not project dividends.

Disclosures

INFORMATION, NOT INVESTMENT ADVICE. This report is the output of an information and analysis tool built on Sectors Financial API (sectors.app) and IDX data. The Rating and Target Price are conditional model outputs of the stated assumptions and sources, not a recommendation or investment advice. Investment decisions are the reader's sole responsibility; do independent research and consult a licensed financial advisor. Past performance does not guarantee future results.

Methodology notes

- Rating and Target Price use SOTP/LoM, the Primary Method for miners: NAV per asset from the physical chain (reserves, feed, recovery, smelter, price, costs, royalty, tax, capex) with no perpetual terminal value.
- Physical and cost inputs come from the official 1H26 release, financial statements and regulation; recovery is implied from metal in concentrate divided by contained metal in 1H26 feed.
- Elang capex, the Elang development probability, stockpile rehandle and concentrate exports are labelled analyst assumptions; Elang capex comes from broker research, not issuer data. The discount rate is a US\$ WACC from a dated UST 10Y + CRP + beta x ERP (analyst policy parameters), as in other US\$ models.
- The price deck, the average of the last 12 calendar months (Sectors when its data is fresh, otherwise a dated Yahoo Finance series), is the 2026 deck and is escalated after that by long-run US inflation of 2.2% a year (IMF WEO Apr 2026), as are costs and capex; JORC reserve prices and +/-20% shocks are in the sensitivity table.
- FY26F EV/EBITDA of 8x is a cross-check in the Method Chain, not averaged.
- A dash (-) means the figure is not available, not zero.
- Rebuilt on 2026-10-06 from evidence as of the Report Date, 2026-09-25; references dated after the Report Date are policies in force at the rebuild.
