FY26F earnings scenario below the latest annual actual

- 1H26 revenue rose 51.0% yoy to US\$270.3mn.
- FY26F scenario: revenue US\$594.6mn and net profit US\$28.7mn; analyst assumptions, not company guidance.
- Buy: Target Price Rp81 (44.6%) from DCF FCFF FY26F-FY30F, WACC 9.3%, g 3.0%.

Latest results set the starting point

GMFI published 1H26 results on 2026-09-18. 1H26 revenue rose 51.0% yoy to US\$270.3mn. 1H26 EBITDA rose 39.1% yoy to US\$34.8mn. 1H26 operating profit rose 80.9% yoy to US\$27.8mn. Material costs rose 129.9% to 43.2% of revenue (1H25: 28.4%), holding back EBITDA margin despite higher activity. 1H26 revenue reached 54.9% of FY2025; the comparison is no substitute for a test against the FY26F forecast. 1H profit equals 37.7% of our FY26F net profit estimate.

Scenario assumptions and their limits

FY26F assumptions: H2/H1 revenue 1.20x, H2 net margin 5.5%, FY EBITDA margin 12.7%, capex/revenue 1.8%. Figures beyond the actual period are analyst assumptions, not company guidance. Model FY26F net profit is US\$28.7mn. The forward scenario takes net profit to US\$41.5mn in FY30F at a 5.0% margin. Since the 2026-09-18 release the stock is down 3.4% (JCI down 1.0%); at the current price FY26F EV/EBITDA is 9.4x.

Target Price based on DCF FCFF

We set the Target Price at Rp81 using FCFF DCF, the Primary Method for a going concern: FY26F-FY30F scenario revenue, EBITDA margin and capex become FCFF after an effective tax rate of 16.6%, D&A and working capital, discounted at a WACC of 9.3% to 2026-06-30 with a Gordon terminal g of 3.0% (71.5% of EV). In US\$, the reporting currency: EV of US\$888.8mn plus cash of US\$42.4mn, less debt of US\$363.8mn and minorities, gives equity of US\$567.4mn, converted to rupiah at Rp17,837/US\$. Historical exit EV/EBITDA has fewer than three data points, so the exit cross-check is not calculated. At WACC +1pp and g 2.0% the value is Rp60. The target implies a FY26F-FY28F EBITDA CAGR of 16.5%, supported by a revenue CAGR of 11.0% and a EBITDA margin moving from 12.7% to 14.0%. Nearest positive catalyst: Aerostructure AS9100D certification. At the Target Price the stock trades on a FY26F PER of 19.8x (current price 13.7x), against a historical P/E band mean of 18.5x. Key risks: Material cost pressure surges 130 percent, Forex differential pressures net profit and Garuda Group customer concentration.

2. Latest results and earnings bridge

GMFI published 1H26 results on 2026-09-18. 1H26 revenue rose 51.0% yoy to US\$270.3mn. 1H26 EBITDA rose 39.1% yoy to US\$34.8mn. 1H26 operating profit rose 80.9% yoy to US\$27.8mn. Material costs rose 129.9% to 43.2% of revenue (1H25: 28.4%), holding back EBITDA margin despite higher activity. 1H26 revenue reached 54.9% of FY2025; the comparison is no substitute for a test against the FY26F forecast.

Second-half assumptions: H2/H1 revenue 1.20x, H2 net margin 5.5%, FY26F EBITDA margin 12.7%, capex/revenue 1.8%. All figures are analyst assumptions, not company guidance.

Exhibit 3. Official interim results and yoy change

Metric	1H25	1H26	yoy
Revenue (US\$ mn)	179.0	270.3	51.0%
EBITDA (US\$ mn)	25.0	34.8	39.1%
Operating profit (US\$ mn)	15.4	27.8	80.9%
Net profit (US\$ mn)	8.8	10.8	23.4%

Exhibit 6. Interim balance sheet

Metric	2026-06-30
Cash (US\$ mn)	42.4
Interest-bearing borrowings (US\$ mn)	363.8
Total equity (US\$ mn)	144.6
Non-controlling interests (US\$ mn)	-
Shares outstanding used in the model (juta)	124,835.3
Shares issued (juta)	124,835.3

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

4. Industry and sentiment

The IDX-listed aviation services, widened from aircraft MRO group has 4 peers with a combined market capitalisation of Rp28.8tn; peer market capitalisation is down 29.2% over the year (capitalisation-weighted). GMFI's market capitalisation is up 220.9%; this change also reflects changes in the share count and does not measure share price return.

Market sentiment: since 2025-09-24, GMFI shares are down 39.1% while the IHSG is down 21.6%. These figures are market context, not a basis for the Target Price.

Exhibit 7. Peer Group conditions, IDX-listed aviation services, widened from aircraft MRO: peers vs GMFI

Metric	Peers (4 issuers, excl. GMFI)	GMFI
Market cap (Rp tn)	28.8	7.0
1-year market cap change	(29.2%)	220.9%
P/E (median peer 0-50x)	n.m.	11.5x
P/B (median peer 0-10x)	n.m.	2.7x
ROE (median)	n.m.	29.6%
Net profit margin (median)	1.8%	6.9%
Liabilities/equity (median)	n.m.	6.1x

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

the median P/E and P/B use the same range as the valuation. n.m.: fewer than three valid peers (P/E 2 peers, P/B 2 peers, ROE 2 peers, liabilities/equity 2 peers).

5. Financial performance and profitability

The four charts below use the same 2024A-FY28F period as Key Financials; forecasts appear only when the scenario is validated.

Exhibit 8. Revenue and growth (2024A-FY28F)

Revenue (US\$) & growth

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Revenue was up 16.8% in 2025A; the FY26F-FY28F scenario gives a CAGR of 11.0%, slower than the historical pace.

Exhibit 10. Net profit and EPS growth (2024A-FY28F)

Net profit (US\$) & EPS growth

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

2025A net profit was up 26.2% against revenue up 16.8%; the gap comes from lines below operating profit (interest expense up 3.8%, tax up 425.0%). Over FY26F-FY28F net profit grows at a CAGR of 21.8% against 11.0% for revenue.

Exhibit 9. EBITDA and margin (2024A-FY28F)

EBITDA (US\$) & margin

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

The 2025A EBITDA margin was 16.2% against a 2-year average of 15.3%; the scenario takes the margin to 14.0% in FY28F, in line with the historical average.

Exhibit 11. DER and ROE (2024A-FY28F)

DER (x) & ROE

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Actual equity was negative at one point, so actual DER and ROE are not meaningful; the scenario takes DER to 3.6x and ROE to 23.6% in FY28F.

6. Catalysts, risks and ownership

Catalysts and risks are selected by their effect on volume, realised prices, costs and the balance sheet; ownership and foreign flows are shown as market context.

The largest shareholder is PT Angkasa Pura Indonesia with 65.8% of shares.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Key risks

Material cost pressure surges 130 percent (operations)

Material costs rose from US\$50.75 million (1H25) to US\$116.65 million (1H26) with rotatable parts jumping 264% yoy to US\$79.92 million; the dominant share of rotatables in the cost structure keeps the EBITDA margin in the 12-13% range and pressures net profit margin expansion to the 4-6% level throughout FY26.

Source: Ekuitas GMF Kini Positif, Laba Semester I-2026 Tembus Rp193 Miliar (2026-09-17); GMF Aero Asia (GMFI) Cetak Laba Bersih Rp193,55 Miliar Semester ... (2026-09-17)

Forex differential pressures net profit (funding)

The Rupiah weakened to Rp17,856/US\$ (end of June 2026) from Rp16,782 (end of 2025), ballooning the forex loss to US\$8.79 million vs US\$0.61 million in 1H25; the direct impact on other expenses, which reversed into a US\$8.68 million expense, caused 1H26 net profit to grow only 23.5% despite revenue surging 51%.

Source: Ekuitas GMF Kini Positif, Laba Semester I-2026 Tembus Rp193 Miliar (2026-09-17); GMF Aero Asia (GMFI) Cetak Laba Bersih Rp193,55 Miliar Semester ... (2026-09-17)

Garuda Group customer concentration (operations)

The Garuda Indonesia Group (Garuda 40% + Citilink 27%) absorbed 67% of 1H26 revenue or US\$182 million; the continuation of GIAA's restructuring, changes in reactivation schedules, or delays in group fleet maintenance directly threaten the backlog and overhaul line utilization that supports 82% of revenue.

Source: Ekuitas GMF Kini Positif, Laba Semester I-2026 Tembus Rp193 Miliar (2026-09-17)

Thin equity post-quasi reorganization (capital)

Attributable equity was only US\$114 million in FY25 (up from -US\$258 million in FY24) following the quasi-reorganization approved at the EGMS on 28 July 2026; working capital and expansion capacity remain limited, so capex on the aerostructure project and Pondok Cabe expansion is highly dependent on internal cash or new funding.

Source: GMF Aero Asia (GMFI) Cetak Laba Bersih Rp193,55 Miliar Semester ... (2026-09-17); Ekuitas GMF Kini Positif, Laba Semester I-2026 Tembus Rp193 Miliar (2026-09-17)

Slowdown in Garuda fleet reactivation (operations)

The 66% yoy growth in the repair & overhaul segment was supported by the reactivation of 2 A320 aircraft and 1 Citilink ATR in 1H26; any delay in the follow-on reactivation schedule or shift in maintenance allocation to third parties will reduce overhaul utilization and pressure the contribution margin of this largest segment in H2.

Source: GMFI Catat Pendapatan US\$270,29 Juta, Tumbuh 51% hingga ... (2026-09-20); GMFI Interim Consolidated Financial Statements, 30 June 2026

Exhibit 26. Further evidence to test the Target Price

Check	Evidence required
Official interim results	Available: 1H26
Operating forecast	Needs drivers for volume, price/mix, margins, capex, working capital, tax and debt.
Valuation	Needs a reconciled FCFF and a consistent terminal sensitivity.
Method Chain	value basis DCF FCFF.
Release decision	The value scenario uses DCF FCFF; review the evidence limits in the tables and method notes before using it.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

10. Peer comparison

The peer group has 5 issuers with market capitalisations of Rp212bn to Rp24,018bn. The peer median and average P/E are not computed because fewer than three peers are valid; GMFI's P/E of 11.5x compares with CASS 8.0x, HELI 8.1x, so its relative position is only indicative. Outliers: negative earnings or no P/E (GIAA, CMPP), negative or unreported equity (GIAA, CMPP); outliers are excluded from the median and average.

Peer multiples below are cross-checks only: peer EV/EBITDA is built from each peer's reports (Yahoo Finance) and is available for 3 peers; it is used in the Method Chain, not in this table. Own-history P/E and P/BV bands are a mean-reversion cross-check on the issuer's own history, not a Target Price: the implied price holds the fundamental drivers (latest EPS and BVPS) constant and lets only the multiple revert to its mean or median. The band chart uses EV/EBITDA in place of P/BV because the BVPS base was not positive before 2026-03-31, so the P/BV band covers only 6 months; the implied EV/EBITDA price = multiple x latest per-share base less net debt per share.

Exhibit 27. Peer Group: selection rationale

Issuer	Exchange	Status	Rationale
Cahaya Aero Services	IDX	used	Aviation services for airlines: ground handling, cargo, catering and aircraft line maintenance; the closest IDX comparable, but not heavy-maintenance MRO.
Garuda Indonesia	IDX	used	Airline, the parent that consolidates GMFI and its main customer; its revenue is mainly flights, not MRO. Loss-making with negative equity, so P/E and P/B are left out of the median.
AirAsia Indonesia	IDX	used	Low-cost airline: a maintenance customer, not an MRO provider. Loss-making with negative equity, so P/E and P/B are left out of the median.
Jaya Trishindo	IDX	used	Helicopter charter operator (Komala Indonesia): aviation services, not maintenance for airlines; small scale (revenue Rp157bn).
JSMR	BEI	excluded	Toll road operator.
CMNP	BEI	excluded	Toll road operator.
META	BEI	excluded	Toll road and water infrastructure.
PORT	BEI	excluded	Port terminal operator.
IPCC	BEI	excluded	Vehicle terminal at ports.
IPCM	BEI	excluded	Ship pilotage and towage services.
KARW	BEI	excluded	Port services; profit close to zero (P/E 158.8x).
BREN	BEI	excluded	Geothermal and wind power producer.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 28. Peer comparison: IDX-listed aviation services, widened from aircraft MRO

Issuer	Mkt cap (Rp bn)	P/E (x)	P/B (x)	EV/EBITDA (x)	ROE	Net margin	Liabilities/equity (x)
Garuda Indonesia (GIAA)	24,018	-	-	36.0x	-	(10.5%)	-
Garuda Maintenance Facility Aero Asia (GMFI) (issuer)	6,991	11.5x	2.7x	-	29.6%	6.9%	6.1x
Cahaya Aero Services (CASS)	3,840	8.0x	2.2x	2.2x	20.3%	14.0%	0.4x
AirAsia Indonesia (CMPP)	737	-	-	-	-	(25.1%)	-
Jaya Trishindo (HELI)	212	8.1x	2.3x	8.1x	28.6%	16.6%	1.1x
Peer median (excl. issuer)	2,289	n.m.	n.m.	8.1x	n.m.	1.8%	n.m.
Peer average (excl. issuer)	7,202	n.m.	n.m.	15.4x	n.m.	(1.2%)	n.m.
GMFI rank	2/5	1/3	1/3	-	1/3	3/5	1/3

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

ratios above 500% are shown as n.m. on a very small revenue or equity base. The issuer under discussion is marked '(issuer)'. n.m.: fewer than three valid peers (P/E 2 peers, P/B 2 peers, ROE 2 peers, liabilities/equity 2 peers).

Exhibit 29. Regional references (context, not valuation peers)

Company	Exchange	Mkt cap (Rp bn)	P/E (x)	P/B (x)	EV/EBITDA (x)	Earnings period
SIA Engineering (S59.SI)	SGX	49,773	21.2x	2.1x	14.6x	FY s.d. 2026-03-31
AAR Corp (AIR)	NYSE	86,575	25.9x	2.8x	14.8x	12M to 2026-05-31
TAT Technologies (TATT)	NASDAQ	8,669	23.1x	2.6x	15.8x	12M to 2026-06-30
Regional reference median			23.1x	2.6x	14.8x	

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Exhibit 30. Per-share value cross-check on peer multiples

Basis	Multiple	Value per share
P/B median peer x BVPS 2026-06-30	n.m.	n.m.
Primary Method Target Price	FCFF DCF on scenario FY26F-FY30F + Gordon terminal; historical exit EV/EBITDA as cross-check	Rp81

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Peer P/E and P/B are not EV/EBITDA and reflect different capital structures. n.m.: fewer than three valid peers (P/E 2 peers, P/B 2 peers).

Exhibit 31. 12M historical P/E, P/BV and EV/EBITDA bands (not a Target Price)

Multiple	Mean	Median	Current (percentile)	Implied at mean / median
P/E	18.5x	15.8x	12.3x (p25)	Rp84 / Rp72
P/BV	3.7x	3.6x	3.6x (p52)	Rp57 / Rp56
EV/EBITDA	18.4x	18.9x	12.5x (p25)	Rp104 / Rp108

11. Financial data

Financial statements 2024A-FY28F: two actual years from the official annual release in US\$ and the first three years of the five-year forecast model (analyst scenario). Forecast revenue, EBITDA and net profit match Key Financials, the performance charts and the valuation exhibits for the same years; lines that cannot be derived read n.m., with the reason in the table note.

Exhibit 34. Income statement

US\$ mn	2024A	2025A	FY26F	FY27F	FY28F
Revenue	421.2	491.9	594.6	666.0	732.6
Cost of revenue	n.m.	n.m.	n.m.	n.m.	n.m.
Gross profit	n.m.	n.m.	n.m.	n.m.	n.m.
Operating expenses	n.m.	n.m.	n.m.	n.m.	n.m.
Operating profit (EBIT)	n.m.	n.m.	60.2	72.7	83.7
Interest income	n.m.	n.m.	n.m.	n.m.	n.m.
Interest expense	n.m.	n.m.	(16.5)	(16.5)	(16.5)
Other income (expense)	n.m.	n.m.	(9.3)	(13.8)	(16.2)
Profit before tax	n.m.	n.m.	34.4	42.3	51.0
Income tax	n.m.	n.m.	(5.7)	(7.0)	(8.5)
Non-controlling interests	0.0	0.0	0.0	0.0	0.0
Net profit	26.9	33.9	28.7	35.3	42.5

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

n.m. in Cost of revenue, Gross profit, Operating expenses, Operating profit (EBIT), Interest income, Interest expense, Other income (expense), Profit before tax, Income tax (actual columns): the official US\$ annual release carries only revenue, EBITDA, earnings and equity; Sectors data for this line exists only in converted rupiah; Cost of revenue, Gross profit, Operating expenses (FY26F-FY28F columns): The Analyst Scenario sets an EBITDA margin, not a gross margin; splitting EBITDA into cost of revenue and operating expenses would need a gross-margin assumption that the valuation does not use and that is not sourced, so it is not modelled; Interest income (FY26F-FY28F columns): Sectors data do not carry interest income for non-financial issuers; interest income is included in net non-operating items.

Exhibit 35. Balance sheet

US\$ mn	2024A	2025A	FY26F	FY27F	FY28F
Cash and equivalents	n.m.	n.m.	65.9	94.6	128.8

Total liabilities and equity	n.m.	n.m.	833.1	861.3	894.9

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

n.m. in Cash and equivalents, Trade receivables, Inventories, Other current assets, Total current assets, Net fixed assets, Other non-current assets, Total assets, Short-term debt, Trade payables, Other current liabilities, Total current liabilities, Long-term debt, Other non-current liabilities, Total liabilities, Total liabilities and equity (actual columns): the official US\$ annual release carries only revenue, EBITDA, earnings and equity; Sectors data for this line exists only in converted rupiah; Trade receivables, Trade payables (FY26F-FY28F columns): Sectors data do not separate trade receivables and trade payables for non-financial issuers; both are included in other current assets and other current liabilities, which move with working capital.

Exhibit 38. Financial statement projection assumptions**Assumption and source**

Analyst Scenario: FY26F-FY30F from official 1H26 actuals plus H2 assumptions and 4 validated out-years (revenue growth, EBITDA margin, net margin and capex intensity); Key Financials and the valuation use the same revenue, EBITDA, capex and profit.

The US\$ scenario is converted to Rupiah at Rp17,837/US\$ (2026-09-24), as in Key Financials, the charts and the US\$ DCF; opening FY2025 balance sheet from equity of US\$114.6mn (official annual release); other Sectors balance-sheet lines restated from the Sectors rate of Rp16,736/US\$ (implied by equity) to the same rate.

Valuation assumption: share count 124.84bn shares, source official share register at 2026-06-30, adjusted for corporate actions to 2026-09-24, flat; EPS uses parent profit and BVPS parent equity over the same share count as the valuation and PER.

Core profit FY26F: US\$35.51mn (reported US\$28.65mn); one-off adjustments in 1H26 after tax and minorities: Foreign exchange loss, net US\$6.86mn. Valuation PER and ROE use core profit; the income statement keeps the reported figures.

FY26 weighted share count (PSAK 56) 124.47bn shares, using the issuer's 1H weighted figure; recorded to reconcile the issuer's annual EPS, while model EPS uses the share count at the Report Date.

Screening assumption: D&A 2.6% of revenue, source official 1H26 depreciation; as in the scenario DCF.

Screening assumption: effective tax rate 16.6%, source median effective rate FY2025-FY2025, Sectors data; as in the valuation. Pre-tax profit = scenario consolidated net profit / (1 - rate); tax = the difference.

Model mechanics: EBIT = scenario EBITDA - D&A; net non-operating items (interest expense and other, net) = pre-tax profit - EBIT, implied by the scenario net margin, not a separate assumption; interest expense = official 1H26 finance costs annualised, flat, split from other non-operating items without changing pre-tax profit.

Screening assumption: non-cash working capital 0.0% of revenue, source FY2025 non-cash working capital negative -4% of revenue; not counted as a source of cash; working-capital increase = intensity x revenue increase, as in the scenario DCF; inventory, other current assets and non-debt current liabilities move proportionally. A negative or unavailable historical basis does not prove that future working-capital needs stay at zero; free cash flow can be lower if operating growth needs positive working capital.

Analyst Scenario: parent share of profit 100.0%, source consolidated profit parent share not reported separately; minority profit adds to NCI equity from an opening Rp3.2bn, source book value FY2025, official annual release; dividends to NCI are not modelled.

Unsourced Analyst Assumption: payout 25.0%, analyst assumption of 25% no historical payout in Sectors data, used only to roll cash and equity forward, as in the screening forecast; cash dividends in year t = payout x parent profit of year t-1; FY26F uses actual FY2025 profit from the official US\$ annual release. DPS and payout are not shown because Sectors data has no historical payout.

Model mechanics: equity = FY2025 balance from the official US\$ annual release + consolidated net profit - dividends; no share issuance or buyback.

Screening assumption: opening debt flat at the FY2025 Sectors balance (short-term Rp433.2bn, long-term Rp6,429.9bn); no sourced repayment or drawdown schedule, as in the screening forecast.

Screening assumption: other non-current assets Rp0.0bn and non-debt non-current liabilities Rp583.5bn flat at the FY2025 balance; investing cash flow is capex only and financing cash flow only dividends and cash-balancing short-term debt, with no share issuance.

Analyst Scenario: annual capex from the scenario; fixed assets = FY2025 balance Rp9,080.8bn + capex - D&A (Sectors fixed assets cover all non-current assets).

Model mechanics: closing cash = FY2025 opening cash Rp733.1bn + net cash flow, not a plug; operating cash flow = parent profit + D&A - working-capital increase + minority profit; the balance sheet balances because every line moves through the income statement or cash flow.

Screening assumption: short-term debt balances cash. Minimum cash = the lower of FY2025 cash Rp733.1bn and the lowest cash-to-revenue ratio of FY2023-FY2025 (3.0%, FY2024) x that year's revenue; when cash before financing falls below the minimum, the shortfall is drawn as short-term debt and repaid first once cash exceeds the minimum. Its interest is not added: pre-tax profit is still derived from scenario net profit, so the implied net non-operating items carry it. Not used in this scenario.

Source: Sectors (market and financial data), issuer disclosures; Sektoral analysis and estimates.

Disclosures

INFORMATION, NOT INVESTMENT ADVICE. This report is the output of an information and analysis tool built on Sectors Financial API (sectors.app) and IDX data. The Rating and Target Price are conditional model outputs of the stated assumptions and sources, not a recommendation or investment advice. Investment decisions are the reader's sole responsibility; do independent research and consult a licensed financial advisor. Past performance does not guarantee future results.

Methodology notes

- Rating and Target Price use FCFF DCF, the going-concern Primary Method, on the Analyst Scenario FY26F-FY30F: revenue, EBITDA margin and capex from the agent, Gordon terminal.
- $FCFF = EBIT \times (1 - \text{effective tax}) + D\&A - \text{capex} - \text{increase in working capital}$; D&A official 1H26 depreciation; tax median effective rate FY2025-FY2025, Sectors data; FY2025 non-cash working capital negative (-4% of revenue); not counted as a source of cash.
- The model is in US\$, the reporting currency: a US\$ WACC of 9.3% from CAPM (UST 10Y 5.2% + CRP 2.5% + beta x ERP) and a pre-tax US\$ cost of debt of 7.7%, market-value weights; value per share is converted to rupiah at Rp17,837/US\$. Valuation date 2026-06-30 (latest official balance sheet in US\$, the model currency; the Sectors year-end balance sheet is only available in rupiah); FY26F cash flows are counted after that date; mid-period convention; terminal value at the end of the last explicit year. At the Rp56 price, the same cash flows imply a WACC of 11.0% (CoE 15.3%); the target assumes the market accepts the policy WACC of 9.3%.
- The exit EV/EBITDA cross-check is not computed: too few comparable historical points.
- The scenario is not a reconciled driver forecast; its status is Assumption-Led.
- A dash (-) means the figure is not available, not zero.
- Rebuilt on 2026-10-06 from evidence as of the Report Date, 2026-09-24; references dated after the Report Date are policies in force at the rebuild.
